"KWIK KUT" **CORE CUTTER**

A Fully Automated Core Cutter

Our Automatic "Kwik Kut" Cutting System gives the operator the ability to enter a desired width in .001" increments and number of cuts into a database. The knife carriage travels to the precise width, stops and cuts the core through a double beveled knife and air cylinder. This process will continue until the programmed job is completed. The cut cores are then slid easily off the drum.

Different diameter drums can be easily slid on and off a 3" solid steel shaft and are quickly locked on and off through a shaft collar. Drum sizes are available from 3"-24". Larger diameter drums available upon request

About K&S Machinery

We are a leading design and manufacturing company in Coil Processing and Handling Equipment including Slitting Lines, Coil Packaging Lines, Traverse Winding Lines, Rewind Lines and Coil Entry Lines.
